

Introduction to Project Management

Duration: **Full Day**

Accreditation: **PMI endorsed course**

Course Overview

This Introduction to Project Management course will help you to better understand the differences between operational or day to day work and that of projects. With the help of our experienced facilitator, you will gain valuable skills to help identify the needs of your projects, how to plan for success, deal with stakeholders well and navigate the risks.

This session would be ideal for areas of the business that have not had much experience or exposure to leading or creating projects but are interesting in increasing their skills in this area. A great session to lead into Agile training or more sophisticated training in project management.

This session will cover

- What is project management
- When to use project management
- Scheduling
- Scope creation
- Planning and sequencing
- Building a team
- Dealing with risks and issues

5 reasons why you should come to Introduction to Project Management

1. You have several projects in your schedule and would like to better understand how to manage these
2. You'd like to better understand the phrases used in project management
3. You're interested in project management as a possible career in the future
4. You're looking to enhance your leadership skill set
5. Your team are planning for a busy year and looking to execute your projects well
